

Microservices

and RESTful APIs

YEGOR BUGAYENKO

Lecture #11 out of 16

90 minutes

All videos are in [this YouTube playlist](#).

All visual and text materials presented in this slidedeck are either originally made by the author or taken from public Internet sources, such as website. Copyright belongs to their respected authors.

Service-Oriented Architecture (SOA)

Microservices and RESTful API

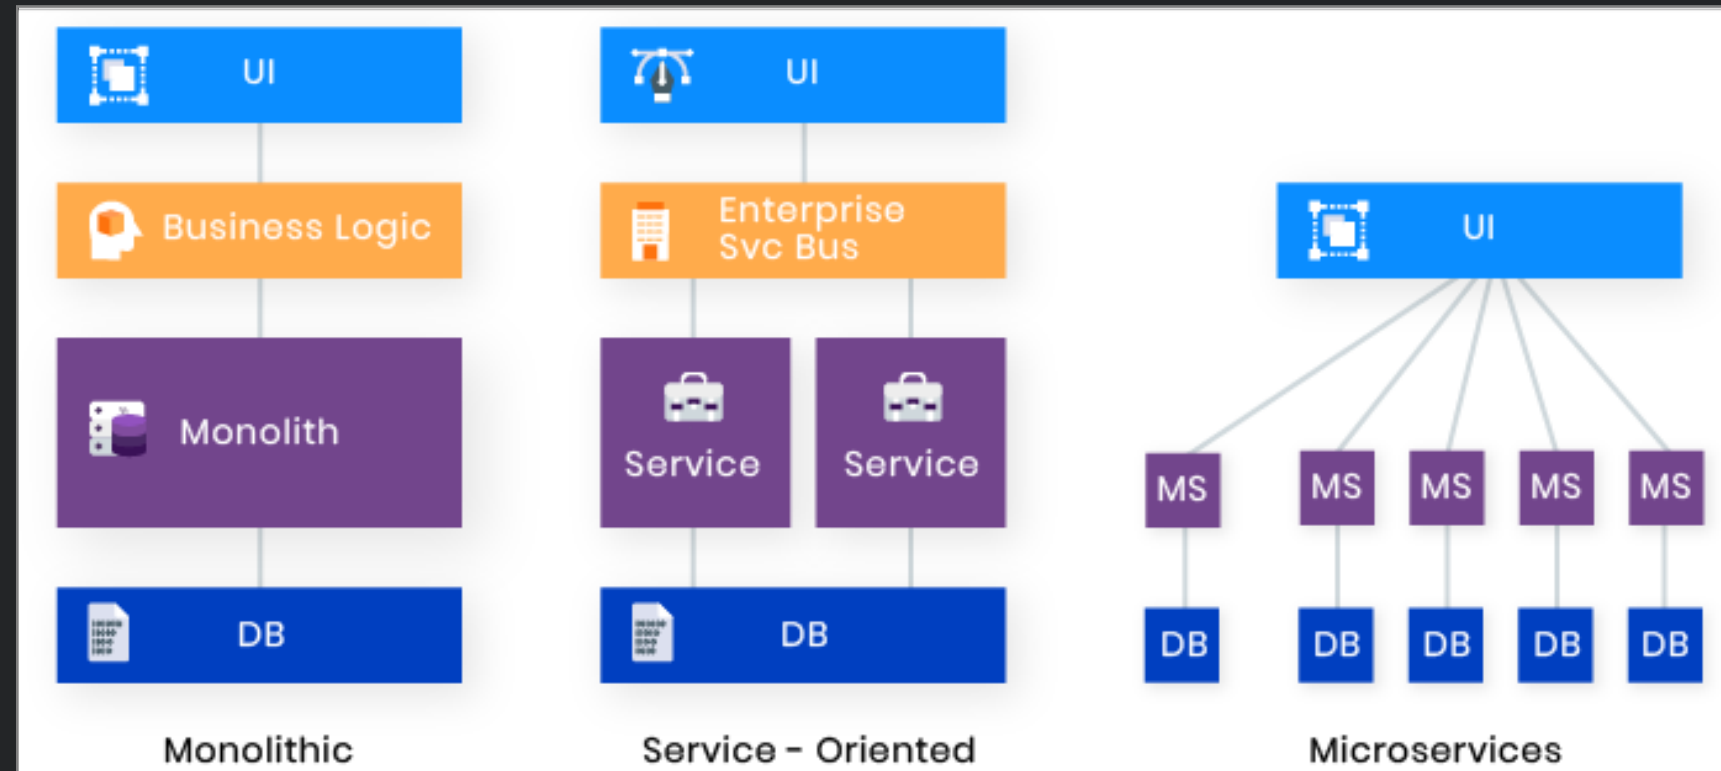

Protobuf and gRPC

Internet of Things (IoT)

Books, Venues, Call-to-Action

Chapter #1:

Service-Oriented Architecture (SOA)

XML RPC

An example of a typical XML-RPC request would be:

```
<?xml version="1.0"?>
<methodCall>
  <methodName>examples.getStateName</methodName>
  <params>
    <param>
      <value><i4>40</i4></value>
    </param>
  </params>
</methodCall>
```

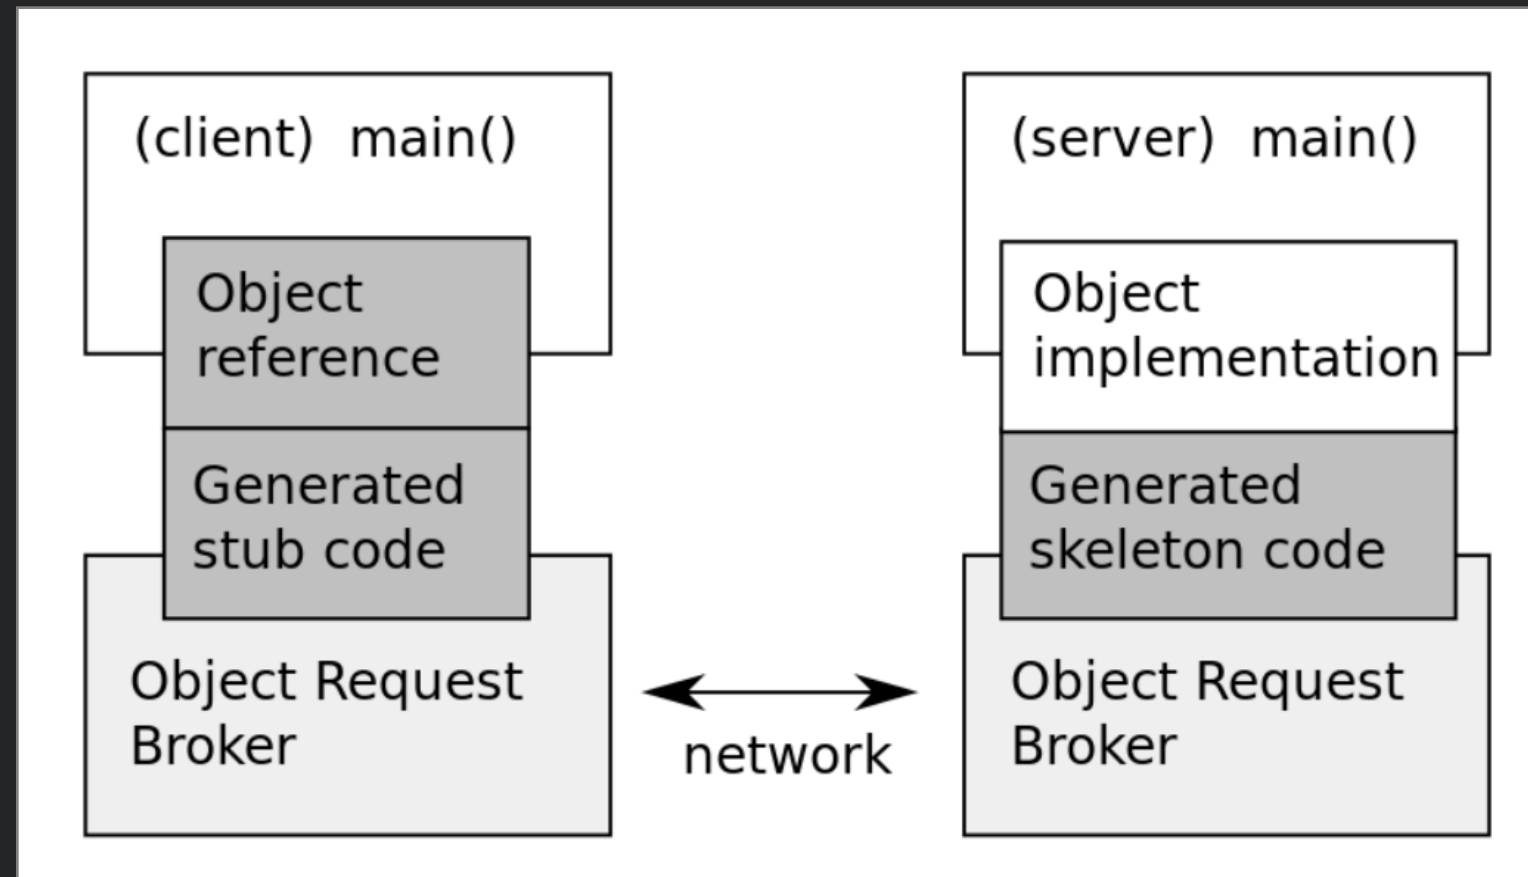

An example of a typical XML-RPC response would be:

```
<?xml version="1.0"?>
<methodResponse>
  <params>
    <param>
      <value><string>South Dakota</string></value>
    </param>
  </params>
</methodResponse>
```

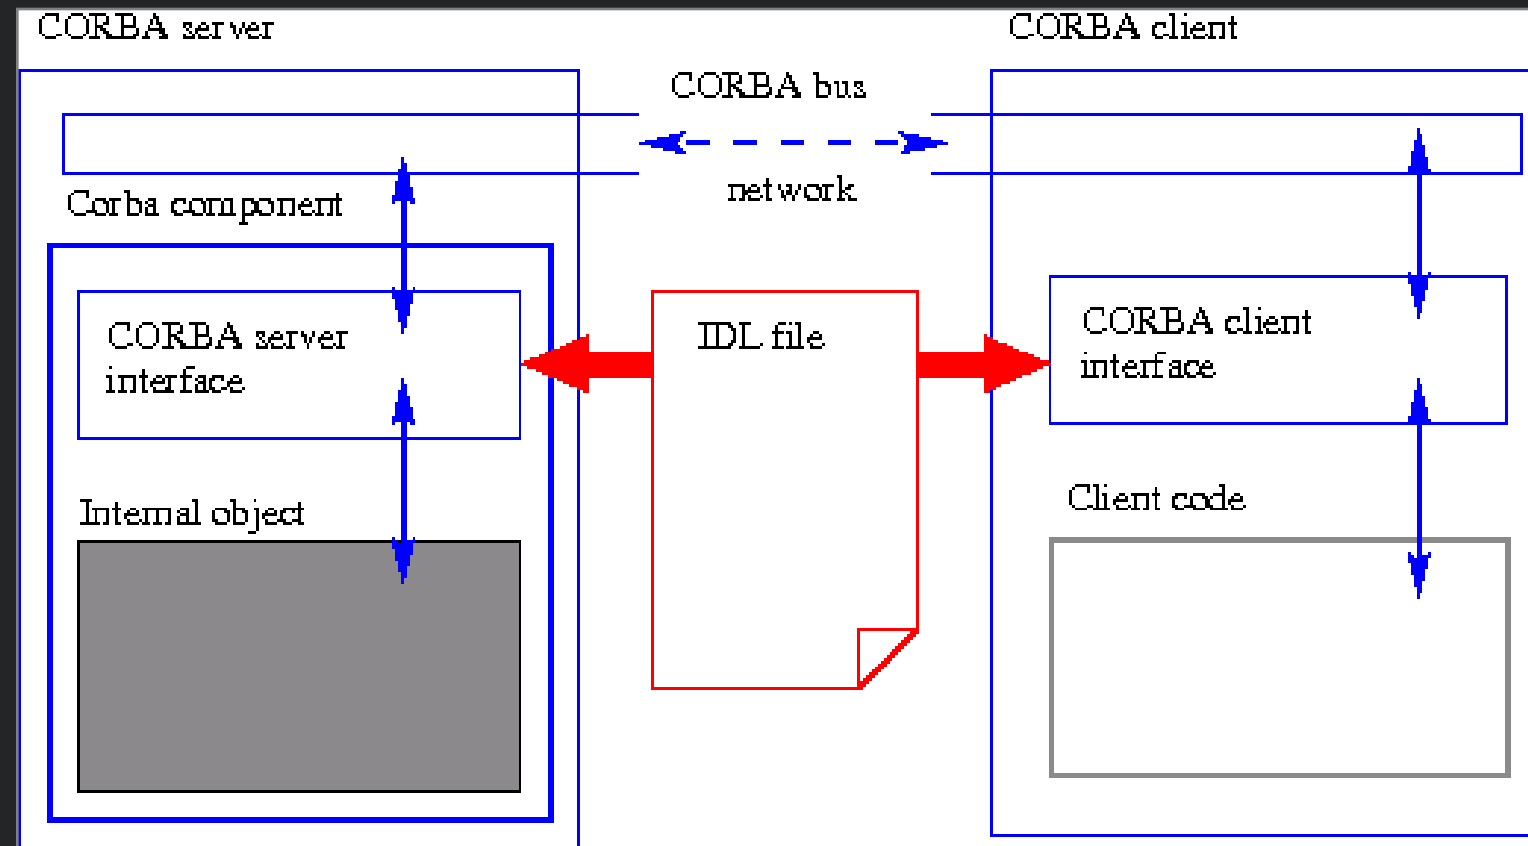

Simple Object Access Protocol (SOAP)

```
<?xml version='1.0' Encoding='UTF-8' ?>
<env:Envelope xmlns:env="http://www.w3.org/2003/05/soap-envelope">
  <env:Header>
    <m:reservation xmlns:m="http://travelcompany.example.org/reservation"
      env:role="http://www.w3.org/2003/05/soap-envelope/role/next">
      <m:reference>uuid:093a2da1-q345-739r-ba5d-pqff98fe8j7d</m:reference>
      <m:dateAndTime>2007-11-29T13:20:00.000-05:00</m:dateAndTime>
    </m:reservation>
    <n:passenger xmlns:n="http://mycompany.example.com/employees"
      env:role="http://www.w3.org/2003/05/soap-envelope/role/next">
      <n:name>Fred Bloggs</n:name>
    </n:passenger>
  </env:Header>
  <env:Body>
    <p:itinerary xmlns:p="http://travelcompany.example.org/reservation/travel">
      <p:departure>
        <p:departing>New York</p:departing>
        <p:arriving>Los Angeles</p:arriving>
        <p:departureDate>2007-12-14</p:departureDate>
        <p:departureTime>late afternoon</p:departureTime>
        <p:seatPreference>aisle</p:seatPreference>
      </p:departure>
      <p:return>
        <p:departing>Los Angeles</p:departing>
        <p:arriving>New York</p:arriving>
        <p:departureDate>2007-12-20</p:departureDate>
        <p:departureTime>mid-morning</p:departureTime>
        <p:seatPreference></p:seatPreference>
      </p:return>
    </p:itinerary>
  </env:Body>
</env:Envelope>
```

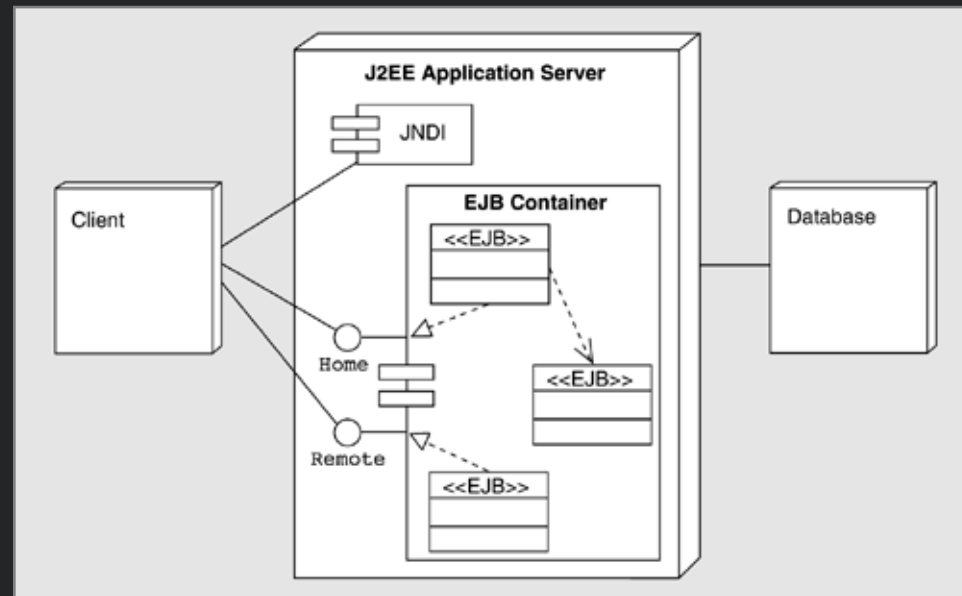

Common Object Request Broker Architecture (CORBA)

Interface Description Language (IDL)

Enterprise Java Beans (EJB)

Java Naming and Directory Interface (JNDI) is an API that provides naming and directory functionality to applications written using the Java.

Remote Method Invocation (RMI) is a Java API that performs remote method invocation, the object-oriented equivalent of remote procedure calls, with support for direct transfer

[SOA](#) RESTful gRPC IoT B.V.C.

10/28

[RPC SOAP CORBA IDL [EJB](#)]

of serialized Java classes and distributed garbage-collection.

Chapter #2:

Microservices and RESTful API

Microservices

“Microservices are a modern interpretation of service-oriented architectures used to build distributed software systems.” — Wikipedia

Stateless vs. Stateful Architecture

“A stateless process or application can be understood in isolation. There is no stored knowledge of or reference to past transactions. Each transaction is made as if from scratch for the first time.” — [RedHat](#)

Representational State Transfer (REST)

Task	Method	Path
Create a new customer	POST	/customers
Delete an existing customer	DELETE	/customers/{id}
Get a specific customer	GET	/customers/{id}
Search for customers	GET	/customers
Update an existing customer	PUT	/customers/{id}

Request Method

Request URI

POSThttps://sis-ext.ap-southeast-3.myhuaweicloud.com/v1/{project_id}/asr/short-audio

Content-Type: application/json
X-Auth-Token: MIINRwYJKoZIhvcNAQcCoIINOD...Request Header

{
 "data": "encode audio by Base64",
 "config": {
 "audio_format": "wav",
 "property": "english_8k_common"
 }
}Request Body

Hypermedia As The Engine Of Application State (HATEOAS)

[Microservices REST HATEOAS Mesh Chatbots]

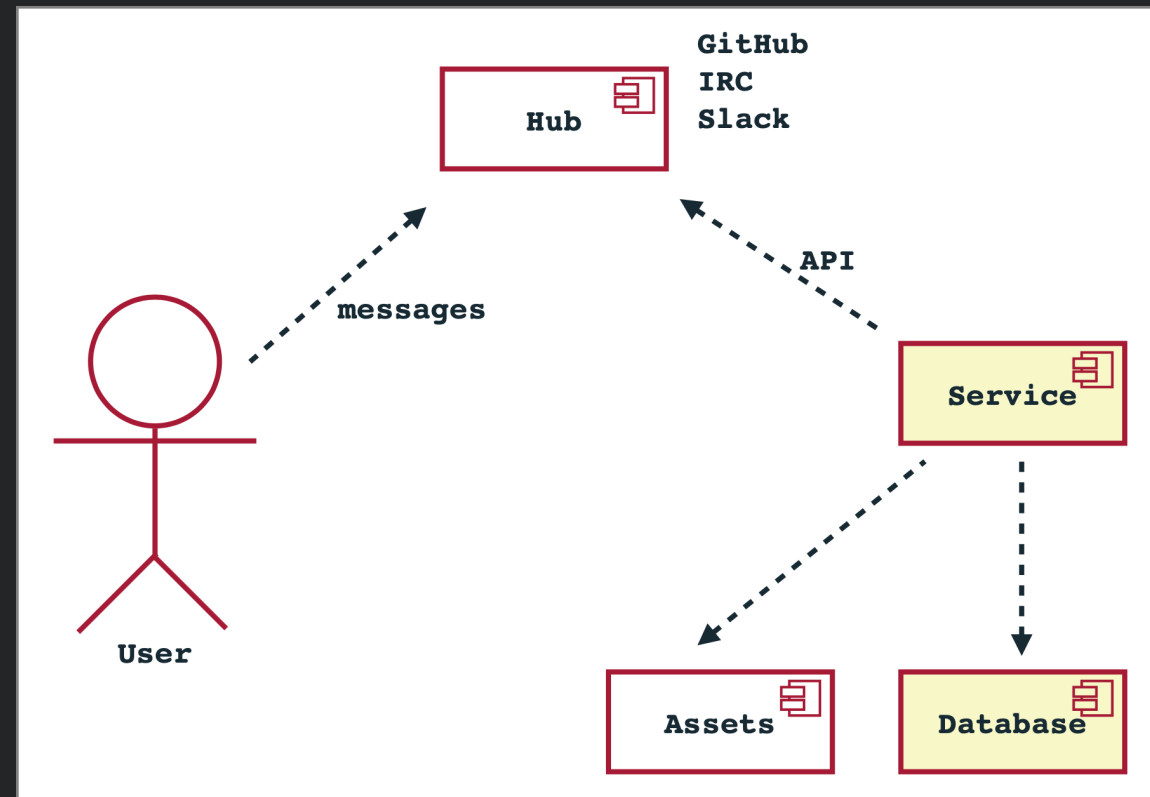

Service Mesh

“A service mesh is a dedicated infrastructure layer for facilitating service-to-service communications between services or microservices, using a proxy” — Wikipedia

[Microservices REST HATEOAS Mesh [Chatbots](#)]

Chatbots

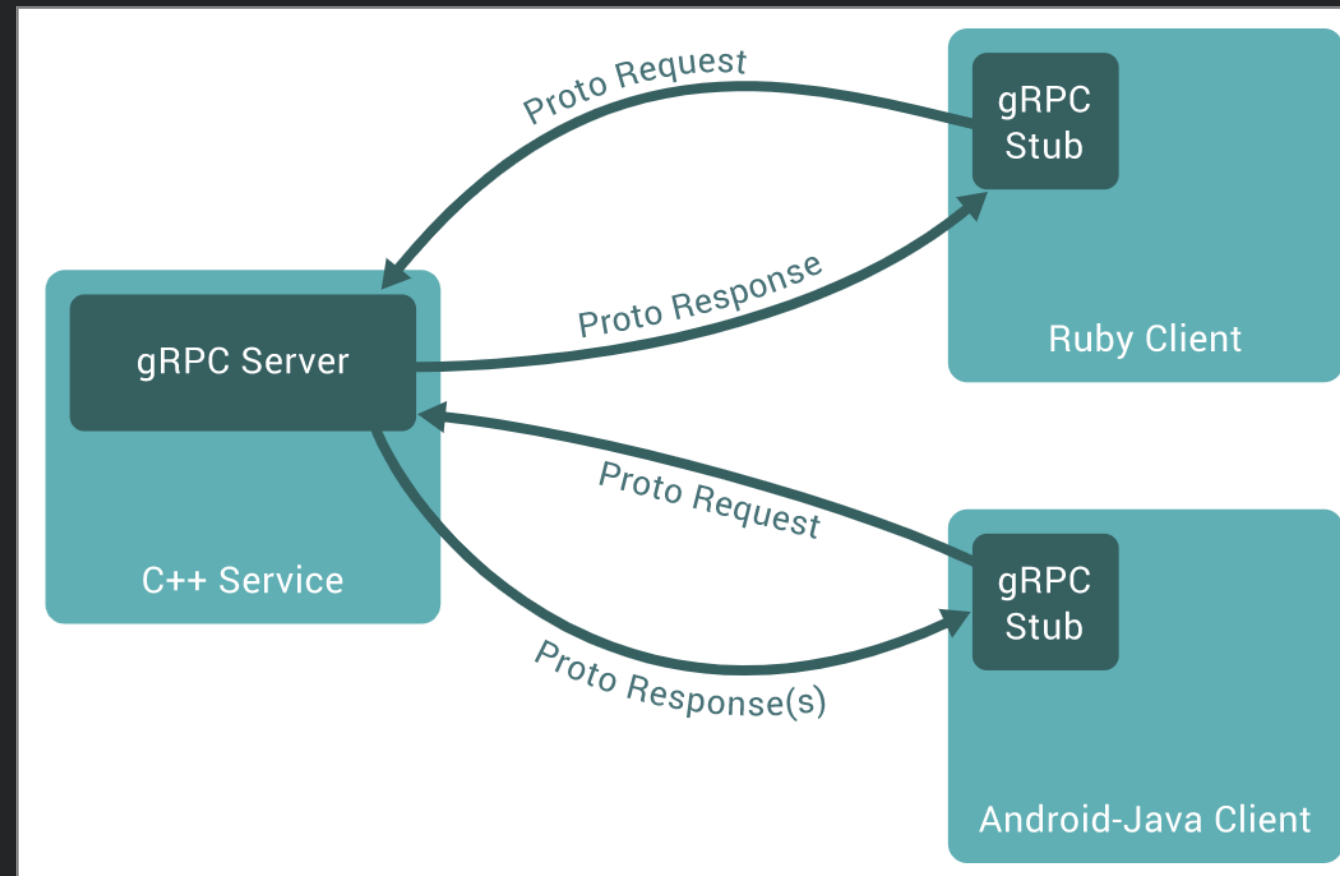

Chapter #3:

Protobuf and gRPC

[gRPC Protobuf]

gRPC

[gRPC [Protobuf](#)]

Protobuf

```
syntax = "proto2";

package tutorial;

message Person {
  optional string name = 1;
  optional int32 id = 2;
  optional string email = 3;

  enum PhoneType {
    MOBILE = 0;
    HOME = 1;
    WORK = 2;
  }

  message PhoneNumber {
    optional string number = 1;
    optional PhoneType type = 2 [default = HOME];
  }

  repeated PhoneNumber phones = 4;
}

message AddressBook {
  repeated Person people = 1;
}
```

```
// name
inline bool has_name() const;
inline void clear_name();
inline const ::std::string& name() const;
inline void set_name(const ::std::string& value);
inline void set_name(const char* value);
inline ::std::string* mutable_name();

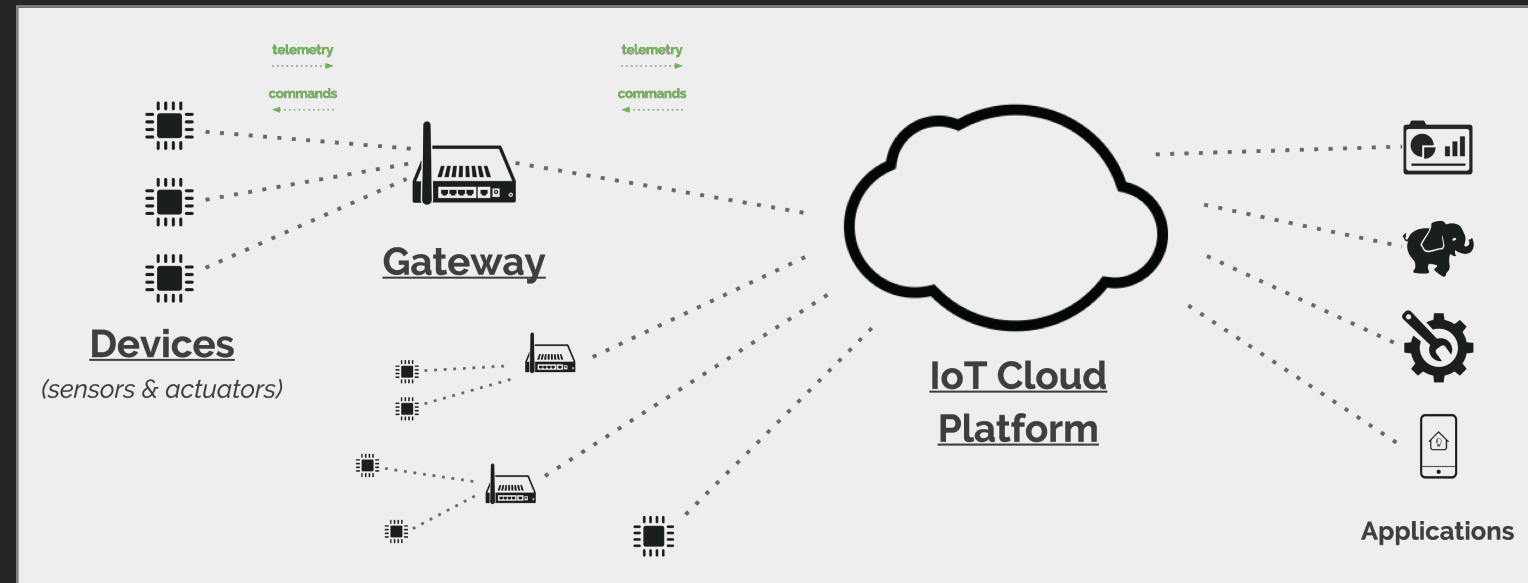

// id
inline bool has_id() const;
inline void clear_id();
inline int32_t id() const;
inline void set_id(int32_t value);

// email
inline bool has_email() const;
inline void clear_email();
inline const ::std::string& email() const;
inline void set_email(const ::std::string& value);
inline void set_email(const char* value);
inline ::std::string* mutable_email();
```

Chapter #4:

Internet of Things (IoT)

Chapter #5:

Books, Venues, Call-to-Action

“RESTful Web APIs: Services for a Changing World” by LEONARD RICHARDSON ET AL.

“Monolith to Microservices: Evolutionary Patterns to Transform Your Monolith” by SAM NEWMAN

Where to go:

IEEE International Conference on Software Architecture (ICSA)

Call to Action:

Design your own RESTful API and publish it at rapidapi.com or similar place, where APIs are “published.”

Still unresolved issues:

- How to validate an API?
- How to generate an API from object model?
- How to test API automatically?
- How to spot integration mistakes between APIs?
